Server Administration

A backend in production should be stored in the cloud which requires servers. We'll configure the servers and deploy your backend to have an uninterrupted service.

☑ Linux server configuration
☑ AWS, Google Cloud, Azure
☑ Devops environment configuration

Technical Consultancy

If you don't know what technologies you should use to get your product developed, we will guide you on how to select your technology stack.

☑ Technology stack identification
☑ Ideation
☑ 2 months free maintenance
☑ User analytics

STARTUP ENGINE

It's a technical incubator where your ideas will be taken to become a startup with an actual functioning product.
Our team will support you through this process and give all the technical support you need to make your idea a success. Not only that, we will develop the product for you.
All you need to do is tell us what you need. You can choose between two options when you want to proceed.

Pitch us your idea → Fine tuning the idea → Designing the product → Developing the product

Usability testing → Finalizing the product → Launching the product → Maintenance and Updates
